

Wabtec Freight Car Components

AxleMax

With the introduction of new and innovative electronic devices for freight car applications, the need for reliable, point-of-use power continues to increase. Wabtec's AxleMax provides an independent source of electric power for freight cars where no other power sources are available.

Features:

- Compact design, meets the AAR Loading Gauge
- 100 W output
- For installation on new or existing rolling stock
- Mechanically attaches to the bearing adapter
- Mounting does not require any modifications to the bearing or bearing end cap
- One device per axle end, multiple devices per wagon depending on power requirements
- Device is maintenance free

Applications:

- Wagon location
- Anti-theft systems
- Monitoring system for special-goods transport
- Freight car monitoring and communications
- Handbrake set/release
- Brake system monitoring
- Customized solutions
